

MORE THAN MONITORING

Masimo Technology

Masimo is a medical technology tool used for monitoring oxygen levels, pulse rate, respiratory rate, and other key vital signs. The purpose is to improve efficiency, detect serious conditions earlier, and take a more proactive approach to care.

*Detects issues earlier allowing a faster response

*Identifies trends in vital signs that suggest seizure activity or early signs of sepsis

*Increased staff satisfaction and confidence in providing care for individuals

21

REAL-TIME MONITORING DEVICES

*More detailed medical information is available to our medical director and rounding specialists. It is also shared with physicians during individuals' external office appointments.

*Helps spot early signs of illness—especially respiratory—so we can step in sooner and potentially avoid ER visits or hospital stays.

*Information collected from 90 day review of technology

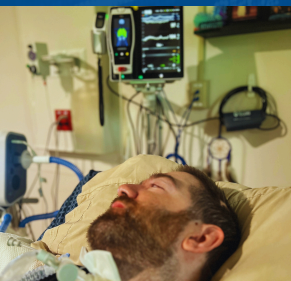

THE BIG PICTURE

Masimo's technology helps Sunshine Communities support more medically complex individuals. Since introducing this technology, we have expanded ventilator care to two additional homes.

This life-saving, noninvasive tool lets caregivers monitor vital signs without causing pain or discomfort.

At Sunshine, Masimo's innovation means we detect issues earlier, deliver care more efficiently, and confidently support individuals with greater medical needs—right at home.

"Masimo's technology has made me a more effective nurse by allowing me to monitor individuals' vitals in real time, even when I'm not physically in the room. It gives me peace of mind and helps us all respond quickly to any changes."
Sunshine Nurse
